

Viaduct Replacement Project construction to affect bicycles entering and exiting Colman Dock beginning this spring

Changes are in store for WSF bicycle commuters this spring as SR99 Tunnel Project crews expand their work zone onto Alaskan Way near Colman Dock. The changes include:

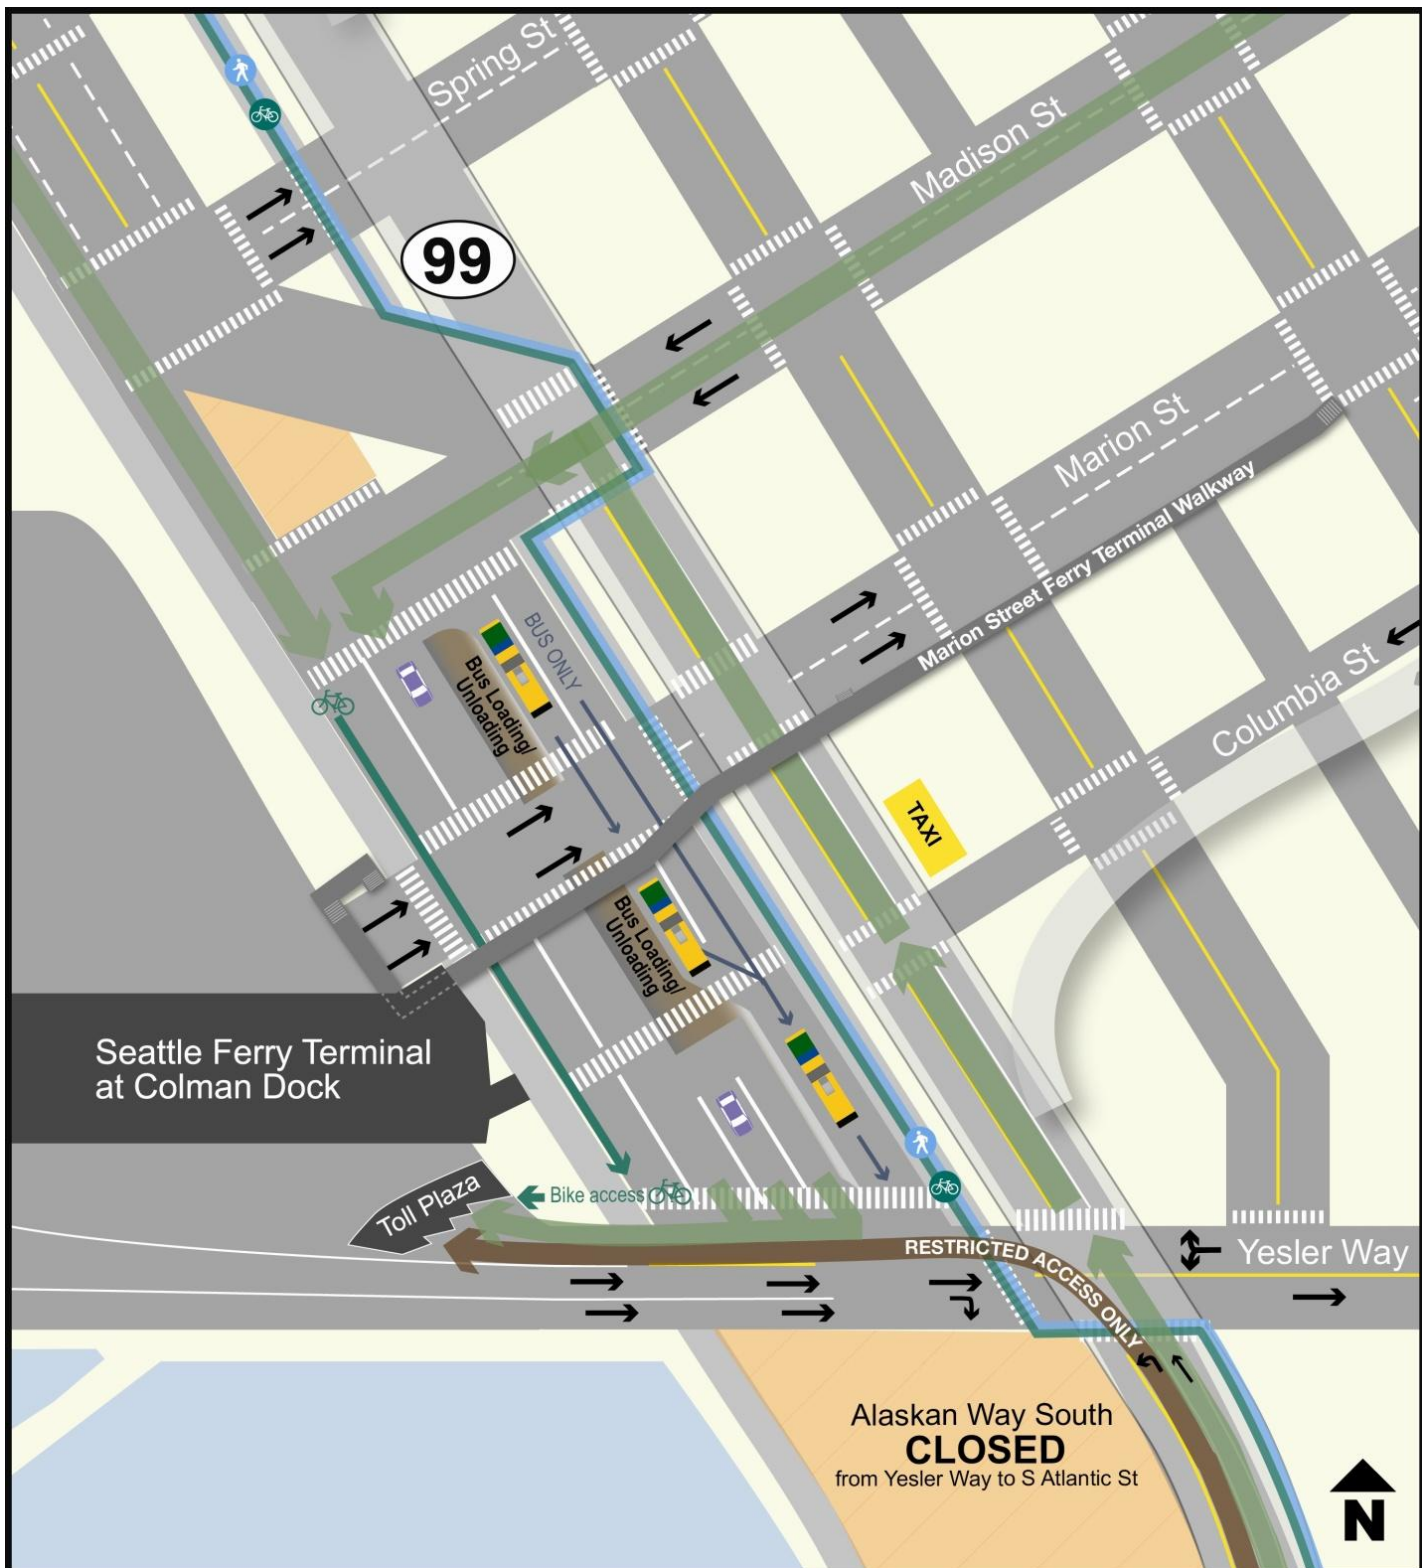

- Vehicle lanes in front of the terminal will be converted into a holding area for ferry traffic; Bus stops will also be located here.
- The roadway below the viaduct will become two-way between King and Spring streets.

If you are a regular bicycle commuter, your access to the terminal will be via a new automated bicycle entry point on the north (right) side of the toll plaza. To get there, you can ride on the curb lane of Alaskan Way from Madison to south of McDonald's, then make a right and cross behind the fountain, thus avoiding the main auto entry roadway. Approaching from the south, ride on the bike lane until you reach Yesler, where you can cross Alaskan Way into the terminal. (See map on back) If you are headed to Colman Dock from the south, you will use a new dedicated bicycle and pedestrian path that runs underneath the viaduct from South Jackson Street to Yesler Way.

All bicyclists holding either Wave2Go multi-ride passenger cards, monthly passes or ORCA cards with a monthly pass or e-purse, can use the automated entry point - simply scan your card or pass and wait for the green signal. One rider at a time. Allow extra time initially to get familiar with the new system. Once beyond the toll plaza, Bainbridge Island riders should follow the road to lane 37, which is now the dedicated waiting area for bicycle commuters between 3 pm and 6 pm; at other times, wait at the staging area beside the Bainbridge slip. Bremerton riders should go to the waiting area adjacent to the Bremerton slip for all ferry departures.

Note: Bicyclists who are traveling on a single-trip ticket must queue in the auto lane and pay the bicycle surcharge.

With these changes, WSF is also closing the north entry gate adjacent to McDonald's and repairing the pedestrian re-entry gates. As a bicyclist, your only entry point into the terminal will now be at the south end of the terminal. If you currently use the north gate, allow extra time to get to the toll plaza.
